

**Low-code Application and Security**

**Celine Blandin – Security Consultant**

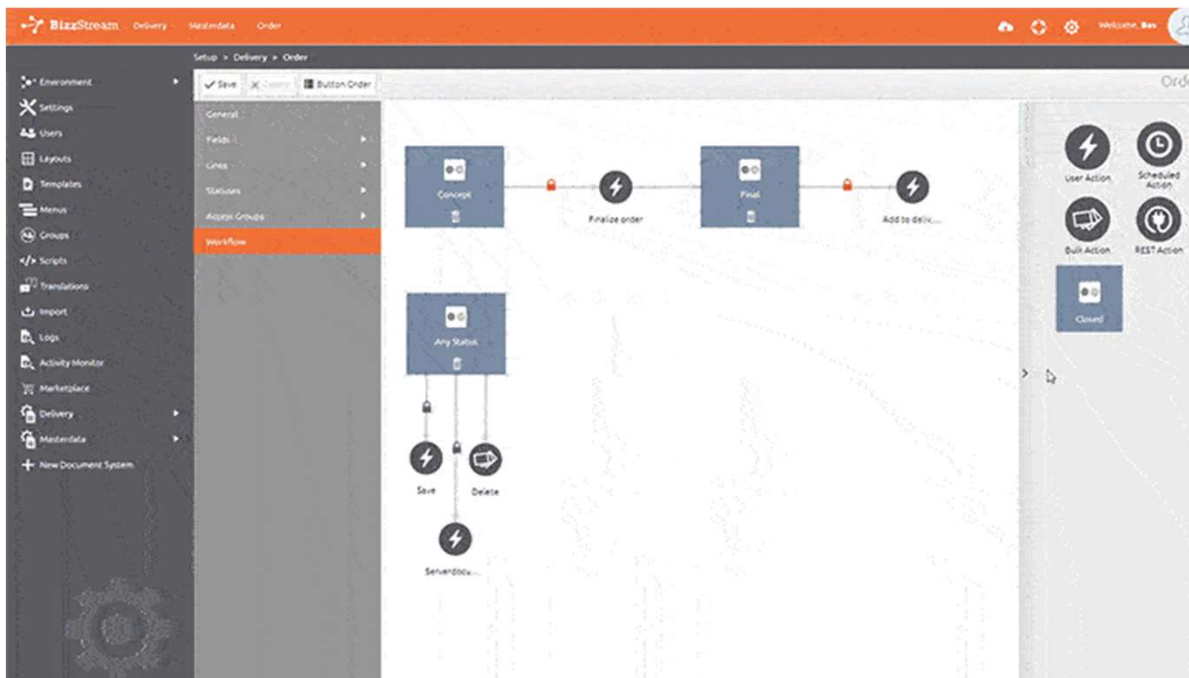

September 2023

# Agenda

- What is Low-code Application
- Security Audit of Low-code application : How?
- Specificity of low-code application pentest
  - OWASP Top10 Low-Code/No-code Applications
  - Enumeration Risks
  - Data Leak Risks
  - Business Logic Analysis

# What is Low-code Application

A low-code development platform (LCDP) provides a development environment used to create application software through a graphical user interface.

- Visual environment, easy to understand and use
- Faster development
- Low maintenance cost

# What is Low-code Application

Forecasts provided by Gartner predict that low-code platforms will account for **65%** of the IT and software development market before **2024**.

Gartner predicts that by **2026**, developers outside formal IT departments will account for at least **80% of the user base** for low-code development tools, up from 60% in 2021.

Important companies already started to use Low-Code platform:

→ Santander

→ Bendigo Bank

→ Washington Federal Bank

→ Al Baraka Bank

→ BNP Paribas

--> Outsystems  outsystems

--> Appian  appian

--> Mendix  mx mendix

--> Mendix

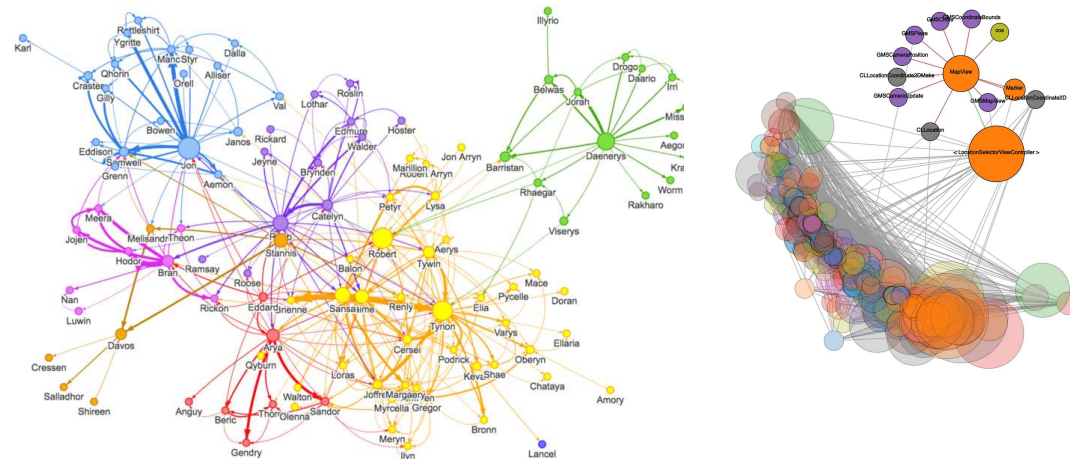

--> Creatio  Creatio

# Security Audit of Low-code application : How?

The larger the application, the more visibility you lose .

Low-code platform is equivalent to :

- No access or difficulty to access the source code – code source size increase
- Lost track of what exactly is build:
  - ◆ inventory mapping,
  - ◆ shadow IT risk,
  - ◆ user privileges track
  - ◆ ...

Important to cover all the ends points

**WHITE BOX Pentest**

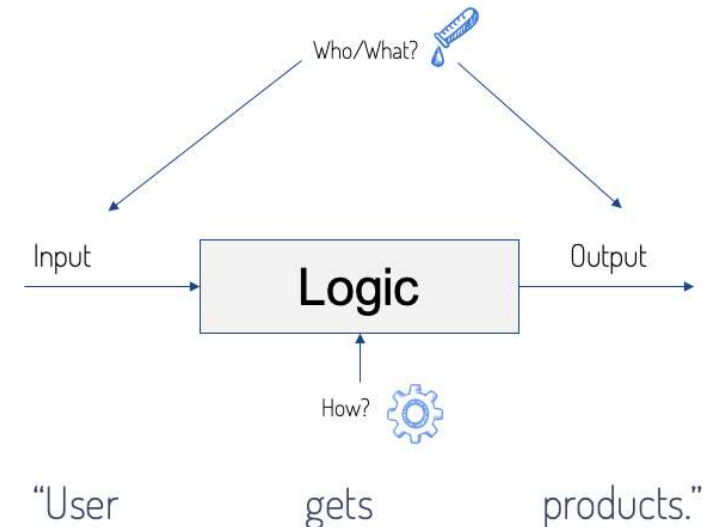

# Security Audit of Low-code application : How?

Low-Code Application have already automatic static scan ( depends of the provider maturity)

- Low probability of injection vulnerability
- Most of vulnerabilities: **Human error, cannot be found by automated audit**

**MANUAL pentest**

# Security Audit of Low-code application : How?

Low-code platform:

- Lack of Control Over the Underlying Code and Infrastructure
- Too Much Dependency on Platform Providers for Support and Update

```
//Load values from database store with channel select  
NotificationClient NotificationClient = null; // = NotificationClient.cs  
if (NotificationClient == null) {  
    NotificationClient = new bl.desktop.NotificationClient();  
    NotificationClient.Insert();  
}  
else {  
    NotificationClient.LastRequest = DateTime.Now;  
    NotificationClient.RequestCount = NotificationClient.RequestCount + 1;  
    NotificationClient.Update();  
}  
if (NotificationClient.Deny == false) {  
    NotificationClient.LastRequest = DateTime.Now;  
    NotificationClient.RequestCount = NotificationClient.RequestCount + 1;  
    NotificationClient.Update();  
}  
//Redirect Message  
for (int i = 0; i <= NotificationClient.RequestCount; i++) {
```

Check Low-Code Platform **PROVIDER** reliability

- Provider vulnerability, cve?
- Reliability source code scanner used (SonarQube, PV5-Studio...)
- Other static scan?

# Specificity of Low-Code application pentest

OWASP has identified the risk of the low-code platforms expansion. Accordingly, they wrote the Top 10, specific to the Low-Code / No-Code applications

<https://owasp.org/www-project-top-10-low-code-no-code-security-risks/>

## OWASP Low-Code/No-Code Top 10

[Main](#) [Join](#) [Contributors](#)

[Stars](#) 53 [slack](#) [nocode](#) [group](#) [nocode](#)

### Overview

Low-Code/No-Code development platforms provide a development environment used to create application software through a graphical user interface instead of traditional hand-coded computer programming. Such platforms reduce the amount of traditional hand-coding, enabling accelerated delivery of business applications.

As Low-Code/No-Code platforms proliferate and become widely used by organizations, there is a clear and immediate need to create awareness around security and privacy risks related to applications developed on such platforms.

The primary goal of the "OWASP Low-Code/No-Code Top 10" document is to provide assistance and education for organizations looking to adopt and develop Low-Code/No-Code applications. The guide provides information about what the most prominent security risks are for such applications, the challenges involved, and how to overcome them.

### The List

1. [LCNC-SEC-01: Account Impersonation](#)
2. [LCNC-SEC-02: Authorization Misuse](#)
3. [LCNC-SEC-03: Data Leakage and Unexpected Consequences](#)
4. [LCNC-SEC-04: Authentication and Secure Communication Failures](#)
5. [LCNC-SEC-05: Security Misconfiguration](#)
6. [LCNC-SEC-06: Injection Handling Failures](#)
7. [LCNC-SEC-07: Vulnerable and Untrusted Components](#)
8. [LCNC-SEC-08: Data and Secret Handling Failures](#)
9. [LCNC-SEC-09: Asset Management Failures](#)
10. [LCNC-SEC-10: Security Logging and Monitoring Failures](#)

# OWASP Top10 Low-Code/No-Code Applications

<b>OWASP TOP 10 Web Applications 2021</b>	<b>OWASP TOP 10 Low-Code/No-Code</b>
A01:2021-Broken Access Control	LCNC-SEC-01: Account Impersonation
A02:2021-Cryptographic Failures	LCNC-SEC-02: Authorization Misuse
A03:2021-Injection	LCNC-SEC-03: Data Leakage and Unexpected Consequences
A04:2021-Insecure Design	LCNC-SEC-04: Authentication and Secure Communication Failures
A05:2021-Security Misconfiguration	LCNC-SEC-05: Security Misconfiguration
A06:2021-Vulnerable and Outdated Components	LCNC-SEC-06: Injection Handling Failures
A07:2021-Identification and Authentication Failures	LCNC-SEC-07: Vulnerable and Untrusted Components
A08:2021-Software and Data Integrity Failures	LCNC-SEC-08: Data and Secret Handling Failures
A09:2021-Security Logging and Monitoring Failures	LCNC-SEC-09: Asset Management Failures
A10:2021-Server-Side Request Forgery	LCNC-SEC-10: Security Logging and Monitoring Failures

# Enumerations Risks

Different vulnerability focus:

## → Enumeration

Audit needs to check every input for enumeration

Try Extract database

Attack Save Columns							
Results Target Positions Payloads Options							
Filter: Showing all items							
Request ▲	Payload	Status	Error	Timeout	Length	null	Comment
0		200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>	
1	root	200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>	
2	admin	200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>	
3	test	200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>

13	puppet	200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>	
14	ansible	200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>	
15	ec2-user	200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>	
16	vagrant	200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>	
17	azureuser	200	<input type="checkbox"/>	<input type="checkbox"/>	180	<input checked="" type="checkbox"/>	

# Data Leak Risks

## Different vulnerability focus:

### → Data Leak

- ◆ Full mapping of the application
- ◆ Check sensible data published by mistake
- ◆ Check error messages

WhiteBox pentest → Test the entire application footprint

# Business Logic Analysis

## Different vulnerability focus:

- **Business Logic:** play with the application, and try to force unwanted behavior

Check permission to end user:

User by group category — Access to data other user

→ Cannot be found by automated audits

→ Manual pentest

# Conclusion

Low-code/no-code applications  future **NORM**

 different security audit focus

- ♦ Security Audit as **White Box**?
- ♦ Security Audit as **Manual Pentest**?
- ♦ Security Audit check **OWASP Low-Code/No-Code Top 10**?
- ♦ Security Audit check for **Enumeration** risk?
- ♦ Security Audit check **Data Leak** risk?
- ♦ Security Audit follows **Business Logic** test?
